InEight Reporting

InEight Reporting provides the visibility and insight managers need to understand project performance and avoid surprises. With InEight Reporting, managers can quickly gather data from multiple project-based systems to generate the reports and dashboards they need to identify issues earlier and make more informed decisions.

Each dashboard provides key performance metrics relevant across the project lifecycle. An open architecture and available integration services enable connectivity with almost any project-based system, including accounting, ERP, scheduling and cost management applications. At the same time, robust design tools support the enhancement of existing reports and the creation of new reports and dashboards to meet specific business requirements.

Manage Risk

Reporting not only provides complete visibility into project revenue, costs, profitability and cash, but also aggregates data across projects to show profitability and liquidity across the project portfolio. The ability to analyze financial data across lines of work and geography can highlight performance issues and provide strategic insights for investing and growth. It also provides both current and historical performance trends.

Increase Productivity

Monitor and investigate resource productivity and utilization of assets involved in projects. Analyzing productivity trends by type of work and at the activity level helps highlight variances and facilitate corrective actions.

Improve Performance

Track project performance on a cost and schedule basis while measuring earned value and project progress in terms of percent complete. Analyze schedule and cost variances by viewing change orders and assessing quality of work for a project. Reporting helps identify at-risk projects and determine their potential impact on profitability. Indicators depicting purchase and buyout performance and backlog reduction will help with future planning.

Gain More Visibility

The web-based portal interface enables easy access wherever and whenever it is needed. Project managers have access to all current project performance KPIs on the jobsite, while managers and executives in the front office have the real-time performance information they need to quickly make informed decisions.

Enable Strategic and Operational Insight

Reporting offers managers current and consistent reporting and business intelligence data across the project lifecycle. Successful firms use reporting and performance analytics to manage their operations, mitigate financial risk, maximize resource productivity and increase project profitability.

Key Features Include:

- Gain complete visibility into revenue, costs, profitability and cash at project and portfolio levels
- Analyze key indicators of financial performance across multiple dimensions
- Analyze financial data by geography and across multiple projects
- View current performance along with historical performance trends
- Combine financial data with project performance details to quickly identify variances
- Track cost and schedule issues in terms of earned value and percent complete

- Track project risk by quickly identifying unapproved change orders and environmental, health and safety issues
- Track project re-work to assess quality of work and its impact on overall profitability
- Plan ahead using indicators and information depicting purchase and buyout performance and backlog reduction
- Determine the risk profile of project portfolios by identifying high-risk projects in terms of schedule variance and safety incidents

- Monitor, track and investigate the jobsite productivity and efficiency of labor and utilization of equipment involved in projects
- Analyze productivity trends by work disciplines and at the activity level to help identify variances and take corrective action
- Track productivity over years and analyze productivity data by project and geography to investigate negative variances that impact financial performance
- Track utilization of equipment assets
