

## Are you working like a caveman in a digital age?

Office and on-site teams leveraging ancient processes often struggle with lack of visibility, control and decision making across the project lifecycle.

In fact, 86% of infrastructure projects have cost overruns, with the average coming in 28% over budget.\*

## How does your company compare?

The Old Way

The New Way

The Solution

### 1: Communication gaps between office and jobsite

**Before:** Paper and manual processes on the jobsite lead to inefficiencies and delays that are difficult to identify and can lead to surprises.

**Now:** Leverage a unified software platform that replaces paper processes.

**How It's Done:**

- Implement a unified PCM system that extends to the jobsite
- Use tablets designed for tough conditions
- Deploy dashboards to make better decisions based on current performance

### 2: Disorganized daily planning

**Before:** Paper plans are finalized but quickly become meaningless as the project meets the unexpected reality of construction.

**Now:** A unified software solution ensures crews are working on the right tasks, and execution is tracked accurately and efficiently.

**How It's Done:**

- Create a process for effective daily planning
- Make use of streamlined electronic communication
- Adopt mobile technology with note-taking and categorization functionality

### 3: Slow and error-prone capture of work progress and timesheet data

**Before:** Paper timesheets may contain reporting errors. And, as they are manually entered into various systems, they provide no visibility across the project lifecycle.

**Now:** Capture work progress and timesheet data with mobile software that is part of a unified platform.

**How It's Done:**

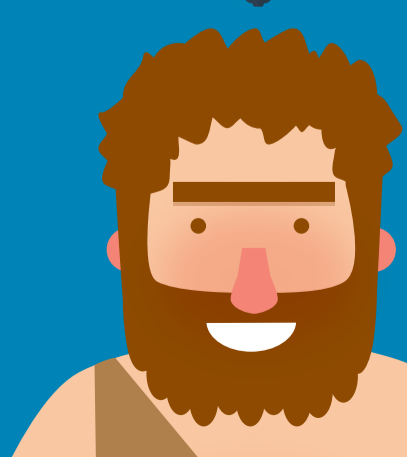

- Leverage mobile technology for real-time productivity reporting
- Ensure systems capture timesheet hours and flow them directly into payroll
- Capture "quantities complete" to improve billing and cash flow processes

The takeaway? Don't be a caveman! Start leveraging technology to connect your office and on-site teams.

Seeking out and implementing a proper mobile solution can get you out of the stone age and into the digital age.

Mobile technology can reduce communication gaps, organize daily planning, and speed the capture of work progress and timesheet data.
