# A CLEAR VIEW DELIVERS PROJECT UNDERSTANDING

## Providing a common data environment, so that business information is a certainty, not an aspiration.

In today's world, incompatible tools and disparate models are the norm, which limits the ability of engineers, contractors and owners to see all aspects of their projects and assets. However, visibility can be gained by looking at BIM in a new way where enriched project models and business information are brought to the forefront of operations. This approach, called project information modeling, increases efficiency, improves communication, minimizes risk and builds project confidence across all phases of design, construction and asset management.

### Taking BIM to a new level and beyond

InEight® Model Suite is the industry's first true project information modeling solution. It gives you a unique view of models connected with business information, providing you with the ability to confidently collect, coordinate, collaborate and capture project information.

### With InEight Model Suite

- **Collect** disparate models in a common data environment, reducing data inconsistency and loss.

- **Coordinate** easily with all project stakeholders by connecting your documents and data related to scheduling, estimating, work planning and more to the model.

- **Collaborate** with stakeholders on the health of your project or asset via reports and dashboards, creating a single source of truth through an enriched model containing all connected business information.

- **Capture** completed field activities in real time using mobile applications and easily locate where work has taken place with bar code scanning and maps.

**Project Information Modeling:** Increases efficiency, improves communication, minimizes risk and builds project confidence across all phases of design, construction and asset management.

# InEight®
## MODEL SUITE

InEight Model Suite connects with scheduling and document management systems used for projects. This connectivity gives your stakeholders unprecedented insights into projects and enables powerful model-based querying, analysis and reporting. InEight Model Suite includes:

### InEight®
### UNITE

Centralizes and standardizes all project models and business information into a common data environment for a holistic view of the project.

### InEight®
### CAPTURE

Extends InEight Unite's model visualization into the field, allowing field users to provide status details and collect data, and reinforce a single source of truth.

### InEight®
### CONNECT

Establishes and maintains connectivity with industry-leading project scheduling and document management systems.

InEight builds construction project management software that enables you to overcome your greatest project challenges. Our solutions span the entire project life cycle from design to estimate and from field execution to turnover and asset management. They provide the real-time information and insights you need to minimize risks, improve operational efficiency, control project costs, make educated decisions, and collaborate easily with all project stakeholders.

**InEight solutions make it easy to build project confidence.**
