

# REALISTIC PLANS WITH INEIGHT

InEight® Basis is an AI-based planning assistant. Through a combination of always-on, context-aware suggestions and team member markup, InEight Basis enables organizations to establish more realistic and achievable project plans quickly.

## PLAN SMARTER

Leverage AI-based planning to review a plan or build one from scratch.

## BE COLLABORATIVE

Capture expert opinions and build consensus.

## GET INSIGHTS

See suggestions on durations, costs and common risks for your project.

## DRIVE SUCCESS

Integrate plan information into scheduling and risk management tools.

# ARTIFICIAL INTELLIGENCE + HUMAN INTELLIGENCE

Artificial Intelligence: InEight Basis utilizes a unique inference engine and machine learning to continually poll the historical project information in the Knowledge Library, presenting benchmarks and suggestions to the planner.

Human Intelligence: InEight Basis provides simple and effective means of gathering team member feedback and buy-in. Flatten team member contribution into a consensus-based plan.

## REALISTIC PLANS

### PLAN SMARTER, NOT HARDER

AI-assisted planning not only accelerates the planning process, but also improves the quality and realism of your plan. Build new plans or evaluate existing ones by drawing from historical knowledge in the Knowledge Library. InEight Basis continually provides suggestions based upon project context, scope and phase of the project you are planning. Every duration, cost and even risk event can be derived from your Knowledge Library and calibrated to match unique project characteristics. Increase project confidence knowing that your plan is supported and calibrated by your history, standards and experiences.

### CAPTURE YOUR TEAM'S EXPERT OPINION

Capture feedback on your plan from experts in the field through a simple markup process. Leverage the scorecard to rapidly solicit opinion and buy in from your expert team, including identification of risks, issues, etc. Get complete visibility and traceability into who contributed and what ultimately made it into the plan. Feedback from team members is stored in their own unique plan redline, allowing the lead planner to selectively incorporate the right feedback into the plan.

### YOU ARE IN CONTROL

Analyze team feedback and incorporate team member expertise (or not) while visualizing the level of consensus and impact on your plan in real time. Measure the achievability of your plan with InEight Basis Insights, including Plan Realism, Plan Buy-in, Plan Continuity and Plan Detail.

### START YOUR PROJECT WITH A REALISTIC PLAN

Integrate with standard scheduling and risk management tools. Plans can be imported from and exported to Oracle Primavera P6 or Microsoft Project. Risk and uncertainty captured in the markup process can be captured and exported for consumption by risk analysis tools, such as Oracle Primavera Risk Analysis and Deltek Acumen.
