

# A LEADING CONSTRUCTION COMPANY IN THE PHILIPPINES USES INEIGHT FOR REAL-TIME VISIBILITY AND CONTROL

As one of the leading engineering and construction companies in the Philippines, this organization builds skyscrapers, malls, infrastructure, office buildings, residential communities and more. Generating annual revenue approaching \$1 billion, the company employs more than 4,000 people.

## THE CHALLENGE

Without an effective project controls systems for managing budgets, the company was struggling to gain visibility into ongoing costs. It also needed a clearer view of productivity levels and project status as well as an estimating system that could scale with its growing business.

The company was using a complex array of independent systems to manage its business, which meant that employees often had to rekey data in an attempt to keep systems aligned. This was not only inefficient, but also caused delays in delivering information to decision makers.

## THE SOLUTION

The construction company chose to deploy InEight solutions for Project Cost Management, Field Execution Management and Connected Analytics. The tightly integrated InEight platform has automated the flow of accurate information between estimating, scheduling, project controls, financials and reporting.

Thanks to InEight's integration with both Primavera P6 and SAP ERP, rekeying data is a thing of the past and decision-makers have immediate access to real-time data on projects as well as financial data including budgets, sales orders and actuals.

## THE OUTCOME

With integrated solutions from InEight, the company has a clearer view of productivity and progress on projects, together with the ability to analyze costs in real time. Employees no longer waste time and effort manually copying data from one system to another, which also reduces the risk of human error.

The InEight solutions ensure that end-of-month billing figures are transferred rapidly and smoothly into the company's SAP system, enabling faster recognition of revenue. And with improved visibility of key business processes, the company is able to build accurate estimates and then manage budgets to ensure the optimal outcomes both for itself and its clients. Backed by real-time reporting and analytics, the company is all set for profitable growth.

## Industry

Construction, Engineering

## Location

APAC, Philippines

## Solution

Project Cost Management  
Field Execution Management  
Connected Analytics

“The integration between our InEight solutions ensures that accurate information flows smoothly across our key processes, helping us to maintain visibility and control.”
