

# NORWEGIAN OIL AND GAS COMPANY REDUCES RISK WITH AI-POWERED SCHEDULING

With exploration, development and production activities focused on the Norwegian continental shelf, this oil and gas company is one of the largest independent businesses in its sector.

## THE CHALLENGE

To help it invest capital in the optimal exploration opportunities, the Norwegian oil and gas company aimed to build realistic schedules for offshore oil and gas development projects faster, more accurately and with fewer iterations.

## THE SOLUTION

With InEight Planning, Scheduling & Risk, the company takes the guesswork out of project planning using critical path method (CPM) scheduling methodologies and AI-powered benchmarking. By surfacing relevant suggestions to planners, the solution allows the company to create more complete schedules earlier in the project lifecycle.

## THE OUTCOME

Today, the solution allows the company's internal and external stakeholders to review and respond to scheduling elements online, saving time in the consensus-building process. The company can also integrate historical data into new schedules, helping to ensure that each subsequent plan is more accurate than the last.

Designed for ease-of-use and offering powerful data visualization capabilities, InEight Planning, Scheduling & Risk makes it virtually effortless for the company to digitize project assets and see them in relation to other assets. Crucially, insights from InEight give the company greater confidence in possible schedule outcomes at an early stage in the planning process—helping to mitigate risk.

“InEight will enable us to bring more projects through the decision process, as we will have much more confidence in possible schedule outcomes at an early stage. We see InEight as a key component of our strategy to improve planning and execution.”

*Planning manager,  
Norwegian oil and gas company*

## Industry

Oil, Gas and Chemical

## Location

EMEA, Norway

## Solution

Planning, Scheduling & Risk
